## MILK COOLING TANKS - INOX STEEL TECHNICAL

According to the needs and daily difficulties of people who want to conserve their milk, the long experience, professional design and continuous improvement of our constructions, Inox Steel Technical is the best choice for care of milk.

By harmonizing our constructions according to European standards, with ISO 9001: 2015, our milk cooling tanks are designed to work perfectly in the most adverse weather conditions of high and low temperatures.

Our concern is to serve our customers directly, having a stock of milk cooling tanks and spare parts.

Some of the advantages of our milk cooling tanks are:

# INOX STEEL TECHNICAL

Inox Machinery Manufacturers For Food & Milk Industries

- Large insulation thickness at both the bottom and the perimeter, we achieve fast cooling and energy saving with branded compressors
- Stainless steel chassis protective covers and additional shielding motor shield.
- Automatic operation of the agitation when the lid is opened.
- Protect the compressor from instantaneous power outages.
- Robust construction based on a cavity tank rather than a sheet metal.
- High-strength bottom (Jacket), tested at high pressures.
- Easy access to the sensor for inspection and eventual replacement.
- With ergonomic design, we save space for easy transportation.

\*Optional voltage monitor installation.

\*\* Optional weighing system installation

\*\*\* They include instructions for correct use and EC declaration of conformity in Greek.
